

CooliMate Rollcage Cover

CooliMate® Rollcage Covers provide a high performance, money saving solution for shipping your temperature sensitive products.

High Performance Insulation

The robust material creates a radiant barrier that reflects up to 97% of heat transferred via radiation (sun, heat) and reflects up to 97% of the cold air back into the product and its surrounding space.

Sizing Up

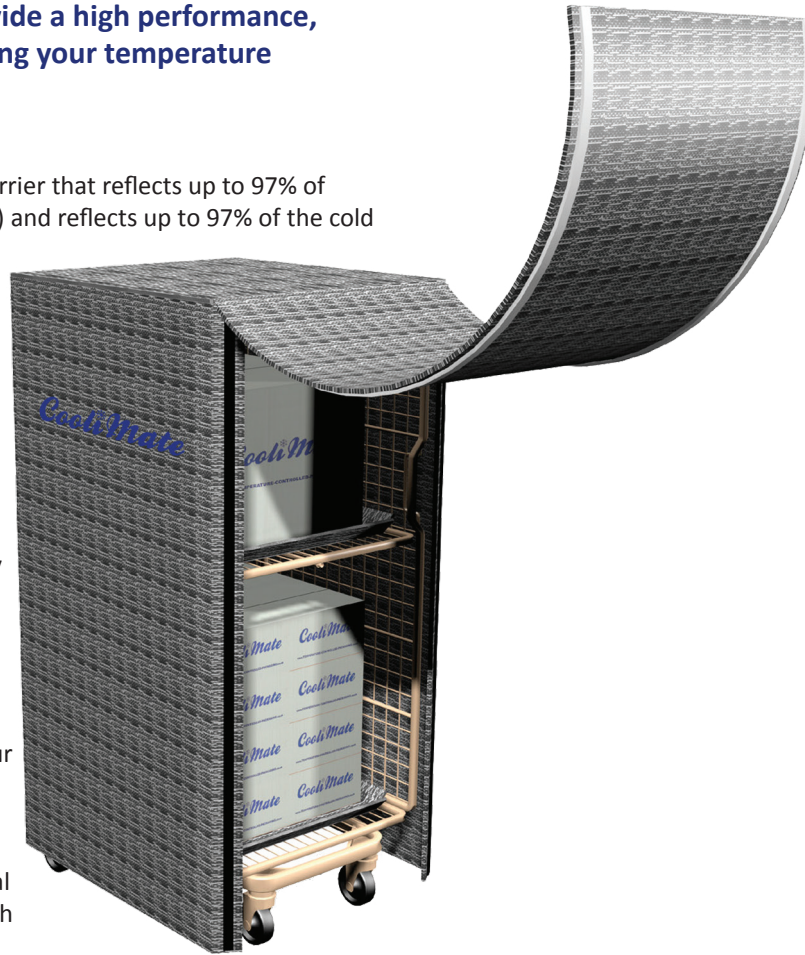

CooliMate Rollcage Covers are made to order on site. This enables us to manufacture them to the customers required dimensions.

Quick Assembly

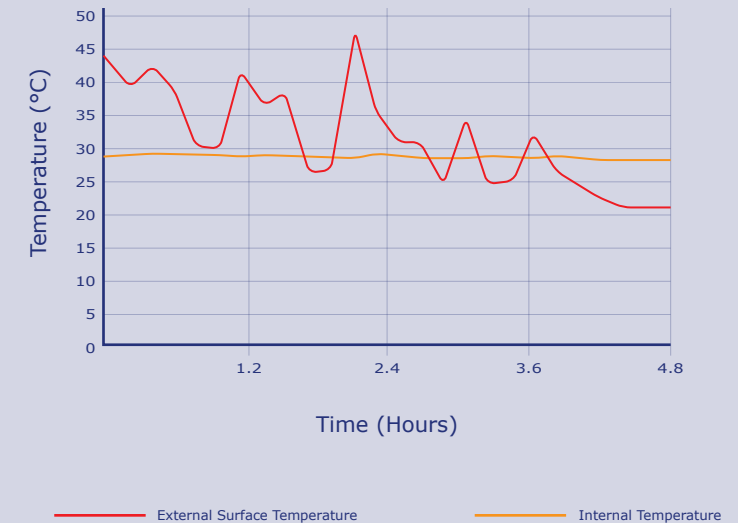

All Coolimate Rollcage Covers are simply unfolded and placed over your rollcage to protect your temperature sensitive products.

Radiant Barrier

CooliMate Rollcage Covers surround your products which creates a radiant barrier to prevent temperature spikes. As you can see from our test results the reflective thermal cover kept the internal temperature below 30°C despite the high external surface temperature.

Test Results

Insulation

Nominal thickness - 4mm

Foil Thickness - 8MY + 25MY PE

Density - 200 gr/m² (±5%)

Flame Resistance - B2

Anti-corrosion coating - NC lacquer

Temperature Controlled Packaging, Unit C-D Haslemere Industrial Estate, Tomlinson Road, Leyland, Preston, PR25 2DY UK
